

MAGNET MOUNT

MAGNET MOUNT SHUTTER INSTALLATION

Every once and a while we have customers request specialty windows with only magnets to mount the shutter. This is most common when ordering a full circle.

We do not recommend this method of installation because it can easily be pulled out of the opening. However we will produce this type of shutter with a signed waiver.

OUR MAGNET MOUNT WAIVER STATES

This form serves as acknowledgment when a Sunland® Shutters dealer places an order for magnet mount configuration acknowledges the following: Magnet mounting of shutters is not a recommended method of installing shutters. Sunland® Shutters will manufacture the shutters as ordered with magnets, but does not warranty or recommend magnets as an installation method. Sunland® Shutters will not warranty the product or accept any claims for damage of product due to inadequate or unsafe installation of product.

However, the use of a latch and hook system in conjunction to a magnet mount installation would create the positive latch system required and necessary for a safe installation of shutters.

We strongly recommend that you use a latch and catch to attach the shutter to the wall in addition to the magnets so that the panel cannot be pulled off the wall without unhooking the latch first.

All of these types of shutters that are installed by Sunland® Shutters installers will be installed with this latch and catch.
